

# NOVALIKER K37

## COMPLETE FATTENING FOR SKINS AND LEATHER

### PHYSICAL AND CHEMICAL PROPERTIES:

Appearance (20°C)		LIQUID
Chemical character		Synthetic and natural oils
Colour		FROM LIMPID TO TURBID BROWN
Recommended uses		Pre-fattening, fattening
Application advice		Leather goods and footwear
Ph		6,5 – 7,5
Active matter	%	About 75%
How to use		Mix before use
Warehousing		At least 2 years in the original sealed package at temperatures between 5°C and 40°C. At low temperature it may become cloudy. In this case, the product should be heated to a temperature between 15°C and 25°C and the contents of drums or the IBC container must be thoroughly mixed.
Observation		The cloudy appearance of NOVALIKER 737 may be due to the insoluble sugars from the lecithin used. This sediment emulsifies in the same way as the rest of the material and does not compromise the results of the application.

### PROPERTY:

**NOVALIKER K37** is recommended for fattening of calves and sheep, but also for all the beef skins. For soft skins we recommend using **NOVALIKER K37** in two phases:

The initial phase has a place before or just after acrylic resurfacing, using a third of the total amount. The remainder is used as a single fattening in the recommended amount of 10-12%.

The most conventional upper-artifacts can be obtained with a single fattening phase. A quantity of 4-5% is recommended to obtain a medium softness.

**NOVALIKER K37** gives good results when used as a single fattening.

**NOVALIKER K37** reduces the variety of products stored in your warehouse and used in recipe, in addition to the number of drums and containers in the weighing area.

**NOVALIKER K37** is used as a single fattening for the most varied items such as classic upper skirt and tassels.

It can be used on cattle, sheep and goats. The degree of softness can be changed simply by varying the amount of fattening used.

**NOVALIKER K37** combines softness in depth with a strong lubricating action on the surface. It conveys a firm grain and uniform hand on the entire skin. The fold of the neck are flattened and less pronounced.

The particular composition of **NOVALIKER K37** does not affect the firmness of the grain, although it is applied in large quantities. The stump can be of any duration.

**NOVALIKER K37** is very suitable for all slippery articles such as nabuck and suede.

These notes are only for information and does not imply any responsibility on the part of the company NOVAKEM SRL, it is the responsibility of the customer to determine the suitability of the product applied to its special processing.
